

University Streamlines with the Help of Kenton Brothers and S2

❌ PROBLEM

Over the last fifteen years, Missouri State University in Springfield, Missouri had invested a considerable amount of time and money in Blackboard, an

Missouri State
UNIVERSITY

education specific database platform for handling point of sale transactions for students, faculty, and staff. The University recognized a need to integrate existing campus operations into a comprehensive, fully-networked campus wide ID, debit and access control system utilizing a single card/credential.

✅ KENTON SOLUTION

As security specialists, Kenton Brothers was asked to provide an access control solution that would integrate with MSU's existing Blackboard platform. This leveraged their existing database to allow students, faculty and staff the ability to enjoy additional convenience and added security on campus, without requiring any additional cards or credentials.

KB installed S2, a web based access control system. With its open architecture and technologically advanced features, S2 meets all of the university's

CONCLUSION

Through customizable programming, Kenton Brothers IP Specialists were able to create a software program which provides the ability for the entire security system to come together. They can now add and remove users, grant or revoke access, and update smart card information all through a single interface, in a matter of minutes.

requirements to integrate with their infrastructure, as well as incorporating into the university's existing security management procedures. As an added benefit, S2 also integrates seamlessly with the university's existing video management system, OnSSI.
