

Cure of Ars Catholic School

Minimize Security Risks in Parish Community Building

❌ PROBLEM

Cure of Ars, like many parish schools, is more than just a school. It's a community building. The school is often used after hours for school, community, and parish business, etc. As a result, the building was susceptible to being left unsecured inadvertently at the night.

School and parish administrators realized that controlling the access of visitors and monitoring their doors was imperative in securing their faculty and students.

ROOT CAUSE

Too many unsecured doors and free access to buildings is a common problem for school buildings and poses a constant security threat. Additionally, not being able to audit who enters/leaves which buildings and when, does not allow them access to critical information during a security threat.

✅ KENTON BROTHERS SOLUTION

Kenton Brothers did a complete site evaluation and created a total physical security plan that incorporates mechanical locking hardware, a high security keying system, electronic access control, protective film for glass doors, IP video surveillance, and remote access control monitoring. The initiative is designed to secure students and staff during the school day but also monitor the activities of people using the facility after hours.

Cure of Ars Protects its People, Property, and Possessions

Cure of Ars can now protect its people, property and possessions by monitoring access and entrants to its school building and through safe and secure doors and keying systems, as well as additional safety features designed to protect building occupants from external violence.
