

## The Kenton Brothers Healthcare Security Solution

Unified Access Control Assign levels of facility and area access based on staff function with an access control system. Paired with video surveillance, it allows for active medical facility monitoring and recording activity, as well as global and departmental lockdown capabilities. Integrating access control and video provides centralized control for easy administration and management.

IP Video Surveillance Take advantage of your existing network by connect IP video surveillance to it. Strategic installation offers a clear view of patients and facilities. Surveillance signage can deter unsafe and would-be criminal acts. Captured images can be used as evidence and to identify individuals.

Staff Security & Protection Use staff badges equipped with wireless call functionality and wall-mounted devices to discreetly summon help over your wireless network or current Wi-Fi. With an active-RFID, RTLS badge, staff members press or pull it when they need assistance or are faced with a threatening situation. RFID technology detects their specific location.

Visitor Management Visitor management systems work with access control points and enhance perimeter security. Visitor management involves registration, badges, tracking and managing visitor access, regardless of who they are and why they're on-site.

Intrusion Detection Systems Receive recommendations for the latest options in intrusion detection, which are carefully evaluated based your healthcare facility's needs and layout.

Emergency Notification Devices Quickly and concisely guide people out of harm's way whether they're inside the facility or on the grounds or parking areas. Incidents are triggered via buttons, consoles, panels and inputs. Designate notification channels. Then, provide emergency directions through communication systems, such as media displays, phone, text, PA systems and more.

Asset & Equipment Management Mark mobile medical equipment with asset tags, which seamlessly communicate with existing systems to provide exact location and condition. On top of inventory control, caregivers can quickly access critical equipment, speeding up workflow and resulting in better overall patient care.

Wandering, Elopement and Fall Detection Track patients or residents with technology features that give them a better quality of care, give families and staff peace of mind, and allow your operations to flow more smoothly. Once sensors and tags are in place and the detection system is deployed, users receive an alert and quickly respond if someone wanders, strays or falls.

**Infant Protection** Protect your most vulnerable patients and give peace of mind to staff and new mothers. Through comfortable tags with tamper alarms and integration with infrastructure, such as access control systems, door locking systems and security cameras, staff can protect infants and focus on their care.

**Environmental Monitoring** Meet compliance standards and prevent product loss with environmental monitoring. Record and track temperature and condition data of mission-critical medicines, vaccines, blood and lab samples to ensure all are safe and ready for patient use. Save time and money by eliminating the need for manual reporting and recording data remotely.

Global Threat Reduction Initiative (GTRI) Meet GTRI protocols by implementing the above security measures to prevent terrorists from obtaining unused radiological and nuclear materials for radiological attacks.

Metal Detectors Add a level of contemporary security technology with Garrett hand-held or walk-through detectors.
