Simplify your business security

Arm and disarm your alarm

Say goodbye to shared PIN codes and alarm keypads. Instead, activate the alarm securely from your phone. Set the *Late to Arm* notification so you can be sure your business is secure, even when you're not there. Use Bluetooth® to arm your site locally when internet connectivity is unavailable.

Easily manage unlimited users

We've made it simple to add, edit, and remove an unlimited number of users, and manage exactly which parts of the building they can control – even temporary users like contractors and cleaners. You'll see who has activated the alarm or requested access at doors using the *History Log*.

Control your doors

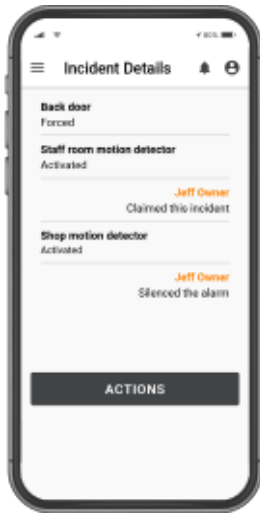

Lock and unlock doors using your smartphone or Gallagher SMB Key Tag. Configure the doors to be locked 24/7, requiring users to request access at the reader, or set a schedule for when doors should be unlocked.

Manage multiple sites

If you manage multiple sites, you can control the security of them all from one app. Easily switch between different locations of your business using the same app, or between your business and home.

Control in your hands, wherever you are

Self-monitor your site

We've made it simple for you to manage security incidents, should your alarm be triggered. You'll get notified as soon as an incident occurs and receive clear details about what is happening on your site. You'll then be able to decide what to do next - investigate further and take the appropriate action, or silence the alarm and close the incident if you know why it was triggered.

Third-party monitoring

With Gallagher security, you can also opt for your system to be configured to third-party monitoring. If your alarm is triggered, the monitoring company will notify relevant parties in accordance with an agreed action plan. This could be people from your site, your security technician, or a guarding company who will send someone to check your premises.

Cloud-based security

Gallagher security for SMB is a cloud-based solution, allowing you to manage your security from anywhere at any time. The system requires no on-site server, or dedicated security staff. It is automatically kept up-to-date with the latest firmware, security updates, and functionality.

You've worked hard to build your business. Let us help protect it.
